## SUMMARY

As a backend developer with over 3 years of experience, I specialize in Golang and Python and have a strong foundation in data. I am currently seeking to transition into a data engineer role where I can utilize my skills in Spark, Python, Airflow, and PostgreSQL to solve real-world problems.

Throughout my career, I have had the opportunity to work on a variety of projects ranging from developing APIs and microservices to implementing data pipelines and analyzing large datasets. My passion for technology and desire to constantly learn and grow has allowed me to excel in my field and become proficient in both Golang and Python.

In addition to my technical skills, I am a strong team player and thrive in collaborative environments. I believe that effective communication and problem-solving are key to success in any project, and I am always willing to go the extra mile to ensure that my work meets the highest standards.

As I look to transition into a data engineer role, I am excited to continue learning and expanding my skillset. I am confident that my experience and dedication to continuous learning will make me a valuable asset to any team.

---

## EXPERIENCE

### Desarrollador de back-end chattigo

-Microservice Golang

June 2022 - Present, Chile

### Data Analyst Municipalidad de Córdoba

Experience working with PostgreSQL, including performing DDL and DML tasks.

In my current role, I am responsible for using Pandas to transform data and perform data analysis to add value to the organization.

I have a strong background in data management and am proficient in using tools like PostgreSQL and Pandas to extract insights and drive decision making.

July 2021 - Present, Córdoba, Córdoba, Argentina

### Software Engineer AARI

"I was responsible for analysis, maintenance, and development for the implementation of a tax/financial system at the Municipality of Córdoba Capital. My duties included:

October 2019 - July 2021, Argentina

- Analyzing modules with different officials and department heads. -Conducting general testing of the system's operation.
- Providing technical and operational training for the project.
- Maintaining the PostgreSQL database.
- Working on the backend using PHP and Express (Sequelize)."
